Subtest 5: Instrument Comprehension

Directions: The Instrument Comprehension subtest measures your ability to determine the position of an aircraft in flight by reading instruments showing its compass heading, its amount of climb or dive, and its degree of bank to right or left. In each test item, the left-hand dial is labeled *artificial horizon*. The small aircraft silhouette remains stationary in the center of this dial, while the positions of the heavy black line and the black pointer vary with the changes in the position of the aircraft in which the instrument is located.

The heavy black line represents the *horizon line* and the black pointer shows the degree of *bank* to right or left. If the aircraft is neither climbing nor diving, the horizon line is directly on the silhouette’s fuselage. If the aircraft has no bank, the black pointer will point to zero (Dial 1).

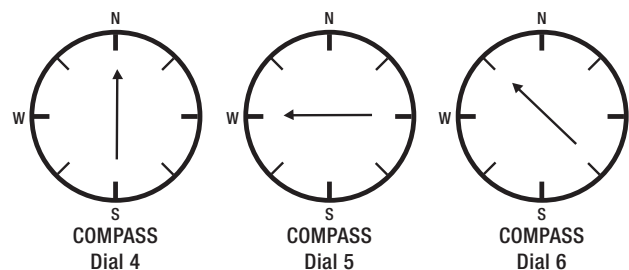

If the aircraft is climbing, the fuselage silhouette is seen between the horizon line and the pointer. The greater the amount of climb, the greater the distance between the horizon line and the fuselage silhouette. If the aircraft is banked to the pilot’s right, the pointer will point to the left of zero (Dial 2).

If the aircraft is diving, the horizon line is between the fuselage silhouette and the pointer. The greater the amount of dive, the greater the distance between the horizon line and the fuselage silhouette. If the aircraft is banked to the pilot’s left, the pointer will point to the right of zero (Dial 3).

The *horizon line* tilts as the aircraft is banked. It is always at a right angle to the pointer.

In each test item, the right-hand dial is the *compass*. This dial shows the direction in which the aircraft is headed. Dial 4 shows north, Dial 5 is west, and Dial 6 is northwest.

Each item in this test consists of two dials and four silhouettes of aircraft in flight. Your task is to determine which of the four aircraft is closest to the position indicated by the two dials. Remember, you are always looking *north* at the same altitude as each plane. East is always to the *right* as you look at the

You may find it helpful to remember that all of the blocks in a pile are the same size and shape. Each stack of blocks is followed by five questions pertaining only to that stack. You have three (3) minutes to complete this subtest.

Subtest 7: Table Reading

Directions: The Table Reading subtest measures your ability to read tables quickly and accurately. Notice that the X values in each table are shown horizontally across the top of the table and the Y values are shown vertically along the left edge of the table. In this test, you are to find the entry that occurs at the intersection of the row and the column corresponding to the values given. On your answer sheet, fill in the letter that corresponds with the number at the intersection of the X and Y values. You have seven (7) minutes to complete this subtest.
